

All wards have to check patients' wellbeing a minimum of every hour to ensure their safety 24 hours per day.

The staff member will be checking your breathing rate, your pulse rate and your wellbeing.

During the day these checks will be completed in person.

We want to know how you would like us to complete these checks between 11pm and 7:30am we want to know

This information will help you to decide if you :

If you would like to be physically checked at night by a staff member entering your bedroom and completing these checks.

or

If you would like these checks to be completed virtually so that you are not disturbed during your sleep.

A device located above the bed allows for these checks to be completed virtually by providing a clear picture for 15 seconds

This clear picture shows you what staff can see when the camera is used for observations.

The camera is used for 15 seconds to check your

- Breathing
- Pulse

After 15 seconds the picture will blur.

You can choose for the virtual system to check you are well.

Or

To check you are well by entering your bedroom.

The virtual system also allows us to:

- Alert staff if you need help
- Let staff know if anyone else enters your room.
- Let staff know if you leave your room.

We want you to choose what will work best for you.
