

Oxehealth is being used on this ward

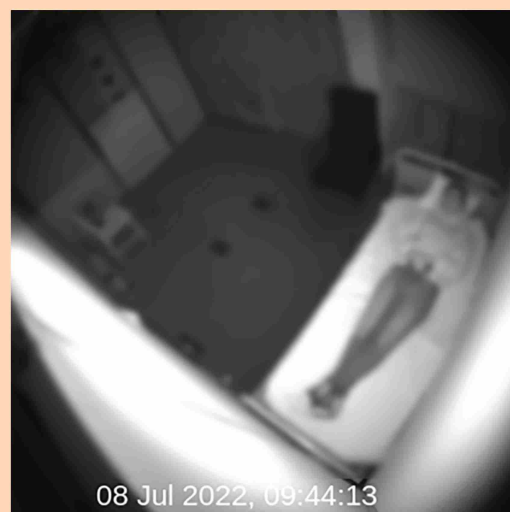

Oxehealth is a medical device that uses a camera to measure your pulse and breathing rate. It provides notifications to staff and uses information to help plan your care.

A **clear** image can be seen for up to 15 seconds only **when checking your pulse and breathing rate**

A **blurred** image can be seen for up to 15 seconds only **when a notification has been received**

These checks are used very infrequently, and only when there is a clinical need.

Do you have any questions?

Patients, carers, family members and advocates can speak to a nurse or ward manager or scan the QR code with your phone camera to find out more.
